

Test Meeting 2 — Project Presentation Preparation

Meeting Title: Final Presentation Planning

Meeting Date: 20 August 2026

Attendees:

Rayyan

Obi

Manuel

Kunwar

Discussion:

The team discussed preparation for the final presentation and software demonstration. The presentation should explain the business problem, final system functionality, changes from the original project plan, individual contributions and potential future improvements.

The team agreed that the software demonstration should follow a realistic workflow rather than showing unrelated features. The demonstration will begin with manager login, followed by employee management, meeting upload, AI processing, manager review and publication. The employee account will then be used to demonstrate assigned tasks, meeting information and task progress.

Decisions:

The final demonstration will use a newly created test meeting.

The demonstration will show both Manager and Employee Portals.

AI-generated information must be reviewed before the meeting is published.

Each team member will explain their own individual contribution.

Action Items:

Kunwar will prepare the frontend demonstration workflow by 22 August 2026.

Rayyan will prepare the architecture explanation by 22 August 2026.

Obi will prepare the project issues and change-management discussion by 23 August 2026.

Manuel will verify the final presentation slides.

Rayyan will also check the FastAPI Swagger interface before the demonstration by 23 August 2026.

Priorities:

Preparing the demonstration workflow is high priority.

Architecture preparation is medium priority.

Reviewing the Swagger interface is medium priority.

No priority was specified for Manuel's presentation slide verification.
